

1. Project Overview

Project Name: Confirmed

Objective: Build a scalable SaaS platform that automates the confirmation and validation of COD (Cash-on-Delivery) e-commerce orders, integrating teleoperators, AI risk scoring, delivery company tracking, and advanced seller dashboards.

Scope: The platform will evolve from a call confirmation service to a full

AI-driven order validation and logistics hub, covering Tunisia first, then COD markets worldwide.

Business owner :

2. Users & Roles

2.1 Seller (Client)

- Register and manage store accounts.
- Connect e-commerce platforms (Shopify, Converty, Tiktok pro, WooCommerce, Prestashop, custom API).
 - *Connect delivery platforms (intigo, first delivery, colissimo)
- Import/export orders.
- Track confirmation status, delivery status, payments.
- Manage subscriptions (Starter, Pro, Business, Enterprise).

1. Register and Manage Store Accounts

Basic:

- Email verification on sign up
- Phone number verification (important for Tunisia & COD markets).
- Role-based access → Seller owner can add **staff accounts** (operators, finance team).

Advanced options:

- Multi-store management under one account (e.g., a seller with multiple Shopify stores).

2. Connect E-commerce Platforms

Integrations:

- Shopify (API + webhooks).

- WooCommerce (REST API).
*converty (API),tiktok pro
- Prestashop, Magento (common in MENA).
- Custom API (for sellers with custom-built stores).

Features:

- Auto-sync orders → confirmed platform pulls orders in real-time.
 - Push-back status → once confirmed, order status updates in Shopify/Woo automatically.
- CSV/Excel fallback:** Even if seller has no integration, they can upload manually.

3. Import / Export Orders

Import:

- Manual entry (for small sellers).
- Bulk CSV/Excel upload.
- Auto-import via API (from store).

Export:

- Download orders with statuses (Confirmed/Delivered/Canceled).
- Export delivery-ready CSV for courier integration (if no API).

1 Bulk Action Concept (Example Flow)

- Seller selects filters (ex: **orders with >70% AI delivery chance**).
 - Platform auto-selects those orders.
 - Seller clicks **Bulk Print** → generates bordereaux, labels, or receipts only for filtered orders.
 - Saves hours of manual sorting → avoids shipping risky orders.
-

2 Smart Filters You Can Offer

AI Confidence Filters

- Orders with **high delivery probability (>70%, >80%, >90%)**.
 - Orders flagged **as risky** (low tone confidence, many address changes, etc.).
 - Orders from **repeat buyers** (trusted customers).
-

Order Value Filters

- Orders **above X TND** (e.g., only ship orders worth >100 TND).
- Orders with **free shipping applied** (seller may want to double-check those).

- Bulk orders (more than 1 item).

✅ Customer Behavior Filters

- New customers (1st order ever).
- Customers who have ordered **3+ times before**.
- Customers with past **complaints** or **cancellations**.

✅ Geographic Filters

- Orders by region/city (Tunis, Sfax, Sousse, etc.).
- Regions with historically **high delivery rates**.
- Regions with **high complaint rates** → double-check before shipping.

✅ Teleoperator Feedback Filters

- Orders with “**Strong Yes**” confirmation.
- Orders with **hesitant tone / weak yes** (operator marked uncertain).

- Orders where **customer asked for discount** → might be risky.
-

✓ **Courier / Logistics Filters**

- Orders assigned to **Courier A vs Courier B**.
 - Orders with **same-day pickup** requested.
 - Orders with **scheduled delivery dates**.
-

✓ **Time-Based Filters**

- Orders confirmed **today / this week / this month**.
 - Orders pending for more than **X hours without confirmation**.
 - Orders flagged for **reconfirmation needed** (customer didn't answer first call).
-

3 Example Bulk Actions (after filtering)

- **Bulk Print Bordereaux** → only ship orders matching criteria.
- **Bulk Export Orders** → send to courier, accounting, or supplier.

- **Bulk Status Update** → mark all selected orders as “Ready for Pickup.”
- **Bulk SMS/WhatsApp** → notify filtered customers (ex: all unconfirmed orders).
- **Bulk Assign** → send filtered orders to a specific teleoperator team.
 👉 Imagine this scenario:
 A seller has **1,000 confirmed orders**. Instead of printing all, he applies:
 - Filter = “>75% delivery chance” → 700 orders left.
 - Bulk Action = Print bordereaux.
 ✓ Seller just saved money by avoiding 300 risky deliveries.
 -

5 Subscription Tie-In

- **Starter (Free)** → only basic filters (by date, region, order value).
- **Pro** → add AI delivery % filters, teleoperator feedback filters.
- **Business** → add geographic trends, repeat buyers, courier filters.
- **Enterprise** → full bulk actions + automation (“auto-ship only orders with >80% delivery chance”).

1. Delivery Company Receipts (Bordereaux)

Feature Goal: Make it easy for sellers to hand over orders to couriers, while keeping tracking centralized.

Basic version:

- Seller can select confirmed orders → click “Generate Delivery Bordereau.”
- PDF generated with:
 - Delivery company logo
 - Seller name & contact
 - List of orders (name, phone, address, COD amount, internal order ID, status)
 - Barcode/QR for each order (linked to Confirmed system).

With courier integration:

- Once bordereau is generated, it's also **pushed automatically to courier's system** (API).
- Seller just needs to hand over packages; courier already has data.

Extra advanced features:

- Multiple couriers → seller can split confirmed orders by courier (FedEx, Aramex, local Tunisian courier, etc.).

- Smart recommendation: “This courier is cheaper/faster for Sfax region.”
- Seller can print **labels with QR/barcode** directly for packages.

👉 **Why it matters:**

- Saves **time** (sellers hate preparing delivery lists manually).
- Reduces **errors** (phone number mistakes, wrong addresses).
- Adds **stickiness**: if Confirmed becomes the place where bordereaux are generated, sellers won't leave.

2. QR Code Support Cards for Buyers

Feature Goal: Give buyers trust & sellers a way to manage complaints transparently.

Workflow:

1. Seller prints a small card (or sticker) with order:
 - “If you have a problem with this product, scan this QR code to contact Confirmed support.”
 - QR → leads to a branded Confirmed page.
2. Buyer scans → form opens:
 - Order ID auto-filled (based on QR code).

- Buyer uploads photo/video proof (defect, wrong product, etc.).
- Buyer describes issue.

3. Confirmed **collects evidence** and mediates:

- Confirms with seller → “Customer claims item is defective, here is video.”
- Suggests resolution: exchange, refund, or resend.

Extra ideas:

- **AI auto-tagging:** If customer uploads a broken shoe → AI tags “Defective item” before operator reviews.
- **Centralized complaints dashboard:** Seller can see % of complaints per product/region.
- **Customer trust badge:** “This store uses Confirmed After-Sales Protection” → builds seller credibility.

👉 Why it matters:

- In Tunisia/MENA, **returns kill profitability**. Buyers don’t trust sellers. Sellers don’t trust buyers.
- By being the **middle-man with proof (photo/video)** → Confirmed becomes **the trusted referee**.

- Long term → you can even build a “**dispute resolution system**” (similar to PayPal disputes).
-
- **Analytics from complaints**
- Example: “10% of Product X is defective → advise seller to change supplier.”
- This positions Confirmed as not just a call center, but as a **business intelligence platform**.
-
- **Merge Bordereau + QR workflow**
- On the printed bordereau/label, also print a **mini QR for customer support**.
- This way, seller doesn’t need to print 2 things → everything is in one place.

1 Centralized Complaints Dashboard

♦ What it is

A single dashboard inside Confirmed where sellers can:

- Track **all customer complaints** in one place (instead of WhatsApp chaos).
 - See **complaint trends per product, region, courier, or reason**.
 - Export reports to Excel/PDF for suppliers, team meetings, or audits.
-

◆ **Example Metrics**

● **By Product:**

- Product A: 12% complaints (bad quality).
- Product B: 2% complaints (logistics issue).
- → Seller realizes Product A supplier must change.

● **By Region:**

- Sfax: 8% late deliveries.
- Tunis: 3% quality complaints.
- → Seller realizes courier performance differs by region.

● **By Reason:**

- “Damaged” 40%
- “Not same as picture” 35%
- “Size issue” 15%
- “Other” 10%

◆ **Benefits**

- ✓ Helps sellers **identify bad suppliers/products quickly**.
 - ✓ Data-driven → sellers can **negotiate with couriers** (“look, 20% of your packages to Sousse are late”).
 - ✓ Builds **seller loyalty** → they can’t get this kind of structured complaint data anywhere else.
 - ✓ Adds transparency and professionalism → feels like “big company tools” even for small sellers.
-

♦ Risks

- ⚠ Small sellers might feel **exposed** if many complaints show up.
 - ⚠ Requires clear UX → too many charts = overwhelming.
-

♦ Monetization

- **Starter plan:** See only total complaints.
- **Pro plan:** Breakdown by product.
- **Business:** Breakdown by product + region.
- **Enterprise:** Full custom analytics + export.
-

Dashboard starter

● 1. Starter Plan (Free or Basic)

🎯 Audience: small sellers testing the platform.

📌 Goal: show them the essentials, **no overwhelm**, but leave “locked features” visible to push upgrades.

Dashboard Layout:

- **Top KPIs (3 simple cards):**
 - Orders Received Today
 - Orders Confirmed Today
 - Orders Pending Confirmation
- **Recent Orders List (table, 10 latest orders):**
 - Order ID | Customer | Status | Value
 - No filters, just a “View All Orders” button.
- **Bordereau Button:** *Generate delivery receipt manually.*
- **Locked Widgets (grayed out with upgrade prompt):**
 - “AI Delivery Scoring (Pro)”
 - “Complaints Analytics (Business)”

✅ Very clean, shows core value.

❌ Sellers won't see risk scoring → they'll want to upgrade.

● 2. Pro Plan (59 TND)

- 🎯 Audience: medium sellers who want AI scoring and bulk actions.
- 📌 Goal: help them make faster, smarter decisions.

Dashboard Layout:

- **Top KPIs (4 cards):**
 - Orders Received Today
 - Orders Confirmed Today
 - Orders Shipped Today
 - Delivery Success Rate (last 7 days)
- **Risk/AI Widget:**
 - Pie chart of order probabilities: High (>80%), Medium (50–80%), Low (<50%).
 - Shortcut: *“Show me risky orders.”*
- **Orders Snapshot (table preview, 10 rows):**
 - Order ID | Status | AI Score % | Operator Feedback
 - Bulk checkboxes → *“Print only >70% chance orders”*.
- **Operator Feedback Widget:**
 - % of strong confirmations vs doubtful ones today.

✓ Sellers feel the **power of AI**.

✗ No advanced complaints or courier analytics yet.

🟡 3. Business Plan (99 TND)

🎯 Audience: serious sellers with 50–500+ daily orders.

📌 Goal: **optimize operations** with complaint tracking and courier insights.

Dashboard Layout:

- **Top KPIs (5 cards):**
 - Orders Received
 - Confirmed
 - Shipped
 - Delivery Success Rate
 - Complaint Rate (%)
- **Risk/AI Widget:** same as Pro, but clickable → open “AI Insights” tab.
- **Complaints Widget (NEW):**
 - Mini-bar chart: Complaints by Product (Top 3).
 - Complaints this week: X new / Y resolved.
- **Courier Performance Widget:**

- Avg Delivery Time per courier (e.g. Courier A = 2.1 days, Courier B = 4.2 days).
- Returns % per courier.
- **Order Table Snapshot:** same as Pro but with more columns: Courier | Complaint Flag.

- ✓ More professional, they can **see problem products & couriers**.
- ✗ More data = more complexity, so onboarding is crucial.

● 4. Enterprise Plan (149 TND)

- 🎯 Audience: big e-commerce players, agencies, aggregators.
- 📌 Goal: **predictive automation** + integrations.

Dashboard Layout:

- **Top KPIs (6 cards):**
 - Same as Business + Avg Resolution Time (complaints).
- **AI Insights Widget (advanced):**
 - List of *“10 High-Risk Orders Today → Cancel/Review.”*
 - Recommendations: *“Switch to Courier B in Tunis, success rate 82% vs 45% for Courier A.”*
- **Complaints Analytics (deep):**
 - Trend line: Complaints % over last 30 days.

- Drill down: by product, by region, by operator.
- **Courier Comparison Widget:**
 - Success rate vs delivery time vs return rate.
- **Repeat Buyer Insights:**
 - % of orders from returning customers.
 - Lifetime value tracking.
- **Integrations Panel:**
 - Status of Shopify/WooCommerce/API sync.
 - Error alerts (e.g. “Product X not syncing”).

✓ Looks like a **command center**.

Ordres interface:

NB: Each order confirmed by wick operator

● 1. Starter Plan (Free/Basic)

🎯 Goal: keep it simple but *show upgrade paths*.

Layout:

- **Order Table (basic):**

- Columns: Order ID | Customer Name | Phone | Status (Pending/Confirmed/Shipped/Cancelled) | Value (TND).

- **Actions:**

-
- “Generate Bordereau” (manual, no filter).

- **Search/Filter:**

- Only by date range (today, last 7 days, custom).

- **Upgrade Locks (grayed out with padlock):**

- “Filter by AI Score → Pro”
- “Courier performance insights → Business”

Starter Plan (Free)

- **Status Column:** Pending | Confirmed | Cancelled.
- **Basic Cancellations List:** Shows only “*Cancelled*” without details.

- **Upgrade Locks:**

- “View reasons for cancellations → Pro.”
- “View failed delivery attempts → Business.”

✓ They see cancellations → curiosity to upgrade.

2. Pro Plan (59 TND)

🎯 Goal: speed + AI scoring + bulk actions.

Layout:

- **Order Table (enhanced):**

- Columns: Order ID | Customer Name | Phone | Status | Value | AI Score % | Operator Feedback.

- **AI Color Coding:**

- Green = >80% (High chance delivery).
- Orange = 50–80% (Medium).
- Red = <50% (Risky).

- **Filters (smart):**

- By AI Score (≥70%, <50%).

- By Operator Feedback (Strong/Weak Confirmation, Price Doubts).
- By Value (e.g., >100 TND orders).
- **Bulk Actions:**
 - Select all >70% orders → Print Bordereau.
 - Export filtered orders to Excel/CSV.
- **Shortcuts:**
 - Button: “*Show Only Risky Orders.*”

 Saves massive time with AI filters.

Pro Plan (59 TND)

- **Status Column Expanded:** Pending | Confirmed | Cancelled (by client) | Cancelled (invalid phone).
- **Cancellation Reason Dropdown (set by operator):**
 - Customer refused (no reason).
 - Price too high.
 - Doubts about quality.
 - Duplicate order.

- Fake number.

- **Report Widget (top bar):**

- “This week: 23% of cancellations were due to Price Too High.”
- “10% of customers doubted product quality.”

✓ Seller starts *seeing patterns* → *actionable insights*.

● 3. Business Plan (99 TND)

🎯 Goal: identify problems with **products, regions, and couriers**.

Layout:

- **Order Table (advanced):**

- Extra Columns: Courier | Region | Complaint Flag (Yes/No).

- **Filters (new):**

- By Courier (see all orders with Courier A).
- By Region (Tunis, Sfax, etc.).
- By Complaints Flag (show orders tied to complaints).

- **Analytics Bar (top of orders page):**

- “Top 3 products with complaints this week.”
- “Courier success rate this month.”

- **Bulk Actions:**

- Re-assign courier in bulk.
- Flag suspicious orders (e.g., same phone number repeated).

 Makes medium sellers feel like pros.

Business Plan (99 TND)

- **Extra Cancellation Categories:**

- Cancelled by courier (customer rejected at door).
- Failed delivery attempt (customer not at home).

- **Delivery Attempts Tracker:**

- Shows how many times courier tried (1st attempt failed, 2nd attempt pending, etc.).

- **Cancellation Analytics (dashboard widget):**

- % cancellations by region.
- % cancellations by courier.

- Top 3 products with high cancellations.

✓ Business sellers see *real leaks in their funnel* (bad courier, wrong regions, wrong products).

4. Enterprise Plan (149 TND)

🎯 Goal: predictive + automation → let the system tell them what to do.

Layout:

- **Order Table (full power):**

- All previous columns + Repeat Buyer (Yes/No) + Lifetime Value (if tracked).

- **AI Recommendations Panel (side widget):**

- “10 high-risk orders → review before confirming.”
- “Courier B is performing 40% worse in Tunis → switch to Courier A.”

- **Bulk Automation:**

- Auto-confirm all >80% orders.
- Auto-assign best courier by region.
- Auto-block duplicate orders (same phone/address).

- **Drill-Down Reports:**

- Orders by product → success rate vs complaints.
- Orders by operator → performance ranking.

- **Integration Panel (if connected to Shopify/Woo):**

- Shows sync status, errors, and re-sync button.

✓ Enterprise users can **manage thousands of orders like an airline control tower.**

● **Enterprise Plan (149 TND)**

- **AI Cancellation Prediction:**

- Orders flagged with high chance of cancellation (“Customer hesitated on call” + “low-value region” → 65% cancellation risk).

- **Auto-Tagging Reasons:**

- Operator chooses reason → system trains AI to auto-suggest next time.

- **Complaint + Cancellation Link:**

- If customer later complains → system links back to cancellation reason → seller sees *full lifecycle*.

- **Strategic Insights Panel:**

- “Product X = 40% cancellations in Sfax → consider price adjustment.”
- “Courier Y = 35% failed deliveries in Tunis → switch provider.”

 Enterprise clients feel like they're running a **data-driven logistics company**.

 **Cancellation Reasons to Include (initial list for operators to tag)**

1. **Price Too High**
2. **Quality Doubts**
3. **Customer Changed Mind**
4. **Duplicate Order**
5. **Fake Number / Invalid Contact**
6. **Not Available / No Answer**
7. **Courier Failed Delivery**
8. **Customer Rejected at Door**

Later you can expand with custom reasons sellers can create themselves.

Product interface

● Seller Upload (what they provide)

1. Product Info Section:

- **Product Picture(s):** Operators see what's being sold (avoids confusion).
- **Landing Page Link:** Operator can check what the customer saw before ordering.
- **Special Notes:** Seller writes instructions like:
 - "This product is fragile, handle carefully."
 - "Offer free delivery above 100 TND."
 - "Tell them about 1-year warranty if they hesitate."

2. Creatives & Ad Copy Section:

- Upload **images, videos, and ad copy text** used in ads.
- Operators can view these directly before calls → they speak the **same language as the ad**.

- Example: if ad says “50% off today only”, operator should repeat that on the call.

3. Product FAQ Section (Optional but powerful):

- Sellers pre-load **answers to common objections**.
- Example:
 - Q: “Is this original?” → A: “Yes, comes with 6-month warranty.”
 - Q: “Is delivery free?” → A: “Yes for orders above 100 TND.”

- Operators get a **ready script**, ensuring professionalism.

Operator View (what they see during calls)

- **Quick Product Card (on call screen):**
 - Product image thumbnail.
 - Key selling points (auto-pulled from notes/FAQ).
 - Link to landing page (clickable if they need to recheck).
- **Script Guidance Box:**

- Shows ad copy headline + special notes → operator speaks the *exact marketing angle*.
- Example: “Angle: Pain relief in 5 minutes” → operator repeats during upsell.

This reduces mistakes like operator saying something **different than the ad**, which frustrates customers.

Pro / Business / Enterprise Features

- **Starter:** Only picture + landing page + notes.
- **Pro:** Adds creatives/ad copy upload.
- **Business:** Adds Product FAQ + operator script guidance.
- **Enterprise:** Adds **AI auto-script** → analyzes landing page + ad copy + past calls → generates optimized operator script.

Extra Features (unique ideas to stand out)

1. Product Performance Dashboard:

- Shows confirmation rate & cancellation reasons **per product**.

- Example: “Product A = 80% confirmed, 20% cancelled (price too high).”

2. Creative Effectiveness Tracker (Pro+):

- If seller uploads multiple creatives → operator tags “customer mentioned they saw Creative 1.”
- Later: Seller sees which creative drove higher delivery rates.

3. Complaint Linking:

- If customer complains later → system links complaint back to **product**.
- Seller sees: “This product = 12% complaints (fragility issue).”
-

TEAM INTERFACE:

Team Interface (for Sellers)

1. Staff Management (General Team)

- Add staff roles: Finance, Marketing, Logistics, Customer Service.
- Each role has **permissions** (e.g., Finance sees invoices, not orders).
- Seller can **invite team members via email**.

✓ Keeps seller's internal staff organized.

○

2. Confirmed Operators Panel (your operators)

💡 This is where you stand out.

Operator Profile Card:

- Picture (or avatar if privacy).
- Name/ID (ex: "Operator #23 – Amal").
- **Performance Stats:**
 - Confirmation Rate (% of calls converted to "Confirmed").
 - Delivery Rate (% of confirmed orders actually delivered).
 - Call Efficiency (avg call duration).
 - Reliability Score (attendance + tagging cancellation reasons correctly).
 - Seller Ratings (if sellers can leave stars).
- **Voice Demo:**
 - 10-second sample of operator confirming an order.
 - Lets seller evaluate tone, professionalism, accent.

Transparency Features:

- Seller sees which operator handled which of his orders.
- Each order tagged: “*Confirmed by Amal.*”

○

3. Engagement Features

- **Tip Button (gamification):** Seller can tip operators directly if they liked their performance.
- **Thank You Notes:** Seller writes short appreciation (visible to operator → motivation).
- **Leaderboard (optional):** Sellers see *Top Operators of the Month* → builds trust.

Subscription-Based Operator Control

- **Starter/Pro:** Seller can only see which operator handled their orders (no choice).
- **Business:** Seller can **choose preferred operator(s)** for their store.
 - Example: “Always assign Amal to Product A (high-ticket), assign Rami to Product B.”
- **Enterprise:**
 - Choose multiple operators by **order type, product, or region.**

- Example: “Orders from Tunis go to Amal, Sfax to Rami, high-value orders to Nadia.”
-

Stats interface:

Starter Plan (Free)

 Goal: show basics, but tease locked stats to push upgrades.

- **Orders Summary (this week/month):**
 - Total Orders Received.
 - Confirmed Orders.
 - Cancelled Orders.
- **Basic Graph:** Orders vs Confirmed (bar chart).
- **Upgrade Locks (blurred with “Pro only”):**
 - “Confirmation Rate by Operator.”
 - “Delivery Success %.”
 - “Cancellation Reasons.”

 Gives a taste.

○

Pro Plan (59 TND)

 Goal: show operational performance & cancellation insights.

- **All Starter Stats +**
- **Confirmation Rate (%)**.
- **Delivery Rate (%)** (confirmed vs delivered).
- **Cancellation Reasons Breakdown (pie chart):**
 - Price Too High.
 - Quality Doubts.
 - Fake Number.
 - Etc.
- **Top Operators (for this seller):** Confirmation % comparison.
- **Daily Trend Line:** Orders received vs confirmed over time.

 Sellers start making **data-driven decisions**.

Business Plan (99 TND)

 Goal: identify **where leaks happen** (courier, product, region).

- **All Pro Stats +**
- **Courier Performance:**

- Delivery Success % per courier.
- Avg delivery time per courier.
- **Region Performance:**
 - Confirmation/Delivery rates by city/region.
 - Heatmap of Tunisia showing weak spots.
- **Product Performance:**
 - Confirmation vs Cancellation % per product.
 - Top 3 products with high complaint rates.
- **Customer Behavior Stats:**
 - Avg order value confirmed.
 - % of repeat buyers (if data exists).

✓ Business sellers get **diagnosis of problems** (bad courier, bad product, bad region).

○

Enterprise Plan (149 TND)

🎯 Goal: predictive & strategic — stats that *tell sellers what to do next*.

- **All Business Stats +**

- **AI Insights Panel:**

- “High chance of cancellations in Sfax this week (price sensitivity).”
- “Courier X underperforming in Tunis (-15% delivery rate).”

- **Forecast Graphs:**

- Predicted order confirmations for next week based on trends.

- **Operator Performance Deep Dive:**

- Objection Handling Score.
- Avg call duration vs success rate.

- **Complaint Analytics:**

- Link complaints → product → cancellation reason.

- **Profitability Estimation:**

- Shows how much money lost due to cancellations.
- Shows how much was saved by using Confirmed vs estimated fake orders cost.

✓ Enterprise sellers feel like they're running a **corporate-level BI dashboard**.

○

Support interface:

Support Interface (Balanced Version for All Plans)

1. Access Points

- **Help button** always visible (top-right corner).
 - **Support tab** in sidebar → dedicated section.
-

2. Support Options

1. Knowledge Base (self-help):

- Articles: "How to upload orders", "Understanding AI scoring", "How confirmation works".
- Search bar with suggestions.

2. Ticket System (core feature):

- Seller clicks "Create Ticket" → chooses category:
 - ♦ Technical Issue
 - ♦ Order / Delivery Issue
 - ♦ Billing & Subscription

- ♦ Operator Feedback

- Upload screenshot / file.
- Ticket status visible: *Open, In Progress, Resolved*.

3. Live Chat (working hours only):

- Small widget bottom-right.
 - If no agent available → converts to ticket automatically.
-

3. Support Dashboard for Seller

- **My Tickets Tab**

- List of all tickets with status + priority.
- Filters: open/closed, by category.

- **Live Chat History** (so sellers can re-check past discussions).

- **Performance Stats (for trust):**

- Avg response time: *e.g. 2h*
 - % of resolved tickets: *e.g. 95%*
-

4. AI Assistant (Lightweight)

- AI chatbot for FAQs → answers instantly, saves human support time.
 - If it fails → escalates to agent with context already attached.
-

5. Feedback Loop

- After each resolved ticket → quick rating (★ 1–5).
- Option to add comment (“Agent helped me very fast 👍”).
- You collect this data → improve support quality & show sellers you care.
 -

Integration interface :

Integrations Interface (Balanced & Scalable Design)

1. Access

- Sidebar tab: **Integrations**
- Clean layout → 2 sections:
 - **E-commerce Platforms**
 - **Delivery Companies**

2. E-Commerce Platform Integration

Sellers can link their online stores → orders sync automatically into Confirmed.

- **Supported Platforms (Phase 1):** Shopify, WooCommerce, Prestashop, Custom API (manual import CSV for others).
- **Future (Phase 2):** Wix, Magento, OpenCart, local Tunisian platforms.

UI/UX:

- Grid of logos → *“Connect Shopify”, “Connect WooCommerce”* button.
- Once connected →  badge + “Last Sync: 5 min ago”.
- Settings: Auto-sync ON/OFF, sync frequency (real-time, every 1h, daily).

👉 **Pro Feature for later plans:** Multi-store integration (a seller managing 3 Shopify stores can connect all into one Confirmed account).

3. Delivery Company Integration

Goal: Make it easier for sellers to send confirmed orders to delivery companies & track them.

- **Integration Options:**

- Direct API connection (Aramex, DHL, local Tunisian last-mile companies).
- If no API → CSV export (orders ready for delivery).

- **Features:**

- One-click push: After confirmation, seller chooses delivery company → order sent automatically.
- Auto-fetch tracking status (In Transit, Delivered, Failed).
- **Receipt Printing (Bordereau):**
 - Generate delivery company's official shipping slip.
 - Bulk printing for 50 orders at once.

Operator view :

Operator Interfaces (Pro-Level Design)

1. Login & Account

- Each operator has **personal account** (username, password, profile picture, voice sample).
 - Roles: Operator, Team Leader (can monitor), Admin.
 - Operator sees: Assigned orders, performance stats, tips received.
-

2. Order Queue (Main Screen)

- **Central view = Order Queue** (like a call center dashboard).
- Orders appear **one by one or in list** depending on settings.

Columns in Queue:

- Order ID
- Customer name & phone
- Product name + special notes (from seller → e.g. “emphasize it’s original”, “limited stock”).
- AI Score (risk % → green, orange, red).
- Order Status: Pending, Confirmed, Canceled, Call Attempt #1/#2/#3.
- Time since order placed (priority sorting: newest or oldest).

👉 **Smart mode:** operator can choose “Auto-Assign” → system feeds them next order automatically → saves time.

📞 3. Call Interface (Core Tool)

- **Integrated calling system:** “Call” button → system dials automatically (via VoIP/telephony integration).
 - **During Call:**
 - Customer info visible.
 - Script / notes section (operator can read seller-provided script).
 - Order details → product, price, shipping cost, delivery estimate.
 - **After Call Popup (mandatory feedback):**
 - Confirmed  / Canceled  / Callback needed 
 - Reason dropdown (price too high, quality doubt, no longer interested, etc.).
 - Tone/attitude feedback (positive, hesitant, rude).
 - Notes field (free text).
-

4. Operator Dashboard (Personal)

- **Daily/Weekly Stats** (gamified to keep motivation):
 - Calls made
 - Confirmation rate (%)
 - Delivery success rate (linked from delivery feedback later)
 - Avg call duration
 - Tips received 💰
 - Ranking among team (gamification = competitions).

👉 Example: “You confirmed 82% of orders today. That’s 2% above team average. 🎉”

After-Call Feedback Form (Operator View)

1. Call Outcome (Main Result)

-  Confirmed Order
-  Canceled by Customer
-  Callback Required (busy, no time, etc.)
-  No Answer (1st attempt / 2nd attempt / 3rd attempt)

2. Customer Tone & Attitude

(Operator ticks what matches)

- 😄 Very positive, excited
- 😊 Polite, confident
- 😐 Neutral, normal
- 🤔 Hesitant, unsure
- 😓 Nervous, worried
- 😡 Rude / Aggressive

3. Price Sensitivity

- ❌ No objection
- 💰 Asked for discount
- 🏷️ Said “too expensive” but still confirmed
- 🚫 Canceled because “price too high”

4. Product Trust & Quality Concerns

-  No doubts
 -  Asked “is this original?”
 -  Compared with competitor / other seller
 -  Canceled due to quality doubts
-

5. Delivery & Logistics Concerns

-  Happy with delivery timeline
 -  Worried about late delivery
 -  Wanted faster shipping
 -  Doubts about address / gave incomplete info
 -  Canceled due to delivery fees
-

6. Confirmation Style (How strong the YES was)

-  Strong “Yes, I want it”
-  Okay, but not very enthusiastic
-  Weak “Ok, bring it...”

-  Didn't really confirm (but didn't cancel either)
-

7. Other Observations (Operator notes)

-  Customer asked for callback later (time/day).
 -  Third-party decision (customer said "I'll ask my husband/wife").
 -  Multiple product interest ("Can I add another item?").
 -  Wrong number / fake number.
 -  Customer sounded distracted / not listening.
-

8. Final Risk Tag (Operator's judgment)

(Operator selects 1 tag)

-  Highly Reliable (almost sure delivery)
 -  Medium Risk (customer hesitant, but confirmed)
 -  High Risk (likely cancel or RTO = return to origin)
-

Example Flow:

- Customer says: “Yes, but is it original? And can you give me discount?”
 - Operator ticks: *Confirmed*  → *Tone: Hesitant*  → *Quality Doubt*  → *Asked for discount*  → *Confirmation*
Style: Weak  → *Risk Tag: Medium* .
 - This structured feedback → AI learns later that these patterns = lower delivery chance.
-

Pros & Cons of Structured After-Call Form

Pros

- Captures rich, standardized data → AI can learn quickly.
- Sellers gain trust (they see *why* an order may be risky).
- Helps train operators (patterns of “bad confirmations”).

AI Scoring Workflow for Operators & Sellers

1. Operator Side: Smart Order Prioritization

AI helps operators handle orders in the most cost-effective way.

- **Order Queue Sorted by Risk Level:**

-  **Low Risk (70–100%)** → Call these first → maximize confirmations with less wasted effort.
-  **Medium Risk (40–70%)** → Call after low risk → still potential but need good persuasion.
-  **High Risk (0–40%)** → Call last or batch → often fake / unserious customers.

 **Benefit:** Saves phone bill + operator energy. Example: Instead of wasting the morning chasing fake numbers, they lock in real customers first.

- **Auto-Assignment:** Operator dashboard feeds next “best order” automatically. No need to pick manually.
-

2. Seller Side: Final AI Risk Score

After the operator’s call, sellers see a **final score** that blends:

- **Pattern Analysis (pre-call):** suspicious phone prefix, weird address, first-time buyer.
- **Past Data (historical):** customer has confirmed before, region delivery success %, repeat buyer.
- **Operator Feedback (post-call):** tone, hesitation, discount-seeking, confirmation strength.

Result: Seller sees something like:

- Order #00123 → **Delivery Chance: 84% (Low Risk)**
- Order #00124 → **Delivery Chance: 42% (Medium Risk)**
- Order #00125 → **Delivery Chance: 17% (High Risk)**
-

*Ai used for operators too to give them low risk orders up to confirm first and then high risk orders to save time and money by the scoring tool that predicts with patterns and data history of customers this for operators but for online sellers they get final result after confirmation which is a mix of patterns and data and operator feedback and they get final percentage or score of any order.

*Missions for operators to accomplish daily ones and weekly ones and monthly and get rewarded extra money.

Operator Missions & Rewards System

1. Daily Missions (Short-Term, Motivating Quick Wins)

Designed to keep operators sharp and consistent every day.

-  Confirm X Orders (e.g. 30 confirmations/day).
-  Reach Y% Confirmation Rate (e.g. >70%).
-  Handle First 10 Calls Before Noon (early focus → reduce delays).

-  Zero Mistakes Mission → No rejected orders due to operator errors.
-  Quality Calls Mission → Get at least 3 positive feedback tags from sellers (“Good tone”, “Clear explanation”, “Professional”).
-  Efficiency Sprint → Complete X calls within an hour with maintained confirmation rate.

Reward Ideas: Small cash bonus (\$1–\$3/day), leaderboard points, badges (★ Fast Caller, 🎤 Golden Voice, 🛡️ No Errors).

2. Weekly Missions (Consistency & Team Spirit)

Encourage operators to maintain performance over a longer period.

- 🏆 Weekly Confirmation Target → e.g. 200 confirmed orders/week.
-  Improvement Mission → Increase confirmation rate by +5% compared to last week.
-  Quality Mission → Collect at least 15 positive seller ratings during the week.
-  Speed Mission → Reduce average “first call attempt” time (call customers within 10 minutes after order).
-  Team Mission → As a group, confirm 90% of all assigned orders → collective bonus (team spirit).

Reward Ideas: Bigger cash bonus, Amazon/food voucher, weekend free hours, public recognition in dashboard (“Operator of the Week”).

3. Monthly Missions (Big Goals, Loyalty & Retention)

Keep operators committed long-term and align them with the platform’s growth.

-  **Elite Confirmation Rate** → Maintain >80% confirmed rate for the whole month.
-  **Low Cancellation Rate** → Less than 5% canceled after confirmation (shows call quality).
-  **Training Mission** → Complete AI-assisted training module or improve risky-order conversions.
-  **Voice of Trust Mission** → Achieve top feedback from sellers (5-star ratings, “favorite operator” selections).
-  **Growth Mission** → Be the fastest in adopting new features (scripts, AI scoring, new seller products).
-  **Loyalty Streak** → Work every scheduled day in the month without absences.

Reward Ideas: Higher-tier bonus (\$50–\$200), eligibility for **Operator of the Month**, exclusive badges, long-term perks (priority on high-paying sellers, ability to choose orders first).

4. Extra Creative Mission Types

To make it fun and not only about numbers:

-  **Best Voice Demo Contest** → Monthly competition where operators record their “perfect pitch call” → sellers vote → winner gets bonus.
 -  **Problem Solver Mission** → Successfully convert 5 high-risk (AI flagged) orders → bonus.
 -  **Regional Specialist Mission** → Confirm most orders from a tough region (e.g. where success rates are usually low).
 -  **Innovation Mission** → Suggest a new script improvement that gets adopted → recognition + cash bonus.
-

5. How to Implement in Interface

Inside the **Operator Dashboard**:

-  **Daily Mission Panel**: “Today’s Targets” → real-time progress bar.
-  **Weekly Goals Tab**: Stats vs team average.
-  **Monthly Achievements**: Medals, trophies, badges displayed next to operator name.

- 🎁 **Rewards Wallet:** Cash & perks summary → instant motivation.
- 📊 **Leaderboard:** Ranking by confirmation %, quality, speed → healthy competition.

Support interface:

🔧 Support View & Interfaces (Confirmed Platform)

1. Core Sections

a) 📧 Ticketing System

- Sellers & operators can open support tickets.
- Categories:
 - Technical Issue (platform not working, integrations)
 - Order Issue (confirmation error, delivery problem)
 - Payment/Invoice Issue
 - Operator Issue (seller not satisfied with operator call)
 - General Question / Training
- SLA (Service Level Agreement): each ticket shows ETA for response (e.g. *Reply within 2h*).

- Priority tags: Low / Normal / High / Urgent.
 - Status: Open → In Progress → Resolved → Closed.
-

b) **Live Chat (In-App + WhatsApp API)**

- In-platform chat → quick questions answered in minutes.
 - AI Bot (first layer): handles FAQs (e.g. “How to print a receipt?”).
 - Human Support (second layer): agents step in for real issues.
 - History of chat saved inside ticket → no information lost.
-

c) **Call Back Request**

- Sellers click “*Call me back*” → support calls within 30 minutes.
 - Operators too can request support call if system bug occurs mid-shift.
-

d) **Knowledge Base / FAQ**

- Searchable articles:
 - “How to connect Shopify to Confirmed”

- “What do delivery statuses mean?”
- “How to read AI risk score”
- “How to add operators to my team”
- Multimedia: short videos, screenshots, step-by-step guides.
- Linked directly from ticket form (*“Did this article solve your issue?”*).

Admin interface:

Admin View & Interfaces (Confirmed Platform)

1. Core Admin Capabilities

The admin should have *god-mode access* across every module:

User & Account Management

● Sellers

- Create, edit, suspend, or delete seller accounts.
- Reset passwords.
- Upgrade/downgrade/change subscription plan manually.
- View seller profile → orders, payment history, complaints, operator ratings.

- Add/remove credits (funds) to balance.
- Assign a dedicated support manager.

- **Operators**

- Create, edit, suspend, or delete operator accounts.
- See operator performance dashboard (confirmation rate, delivery rate, avg call time, complaints).
- Assign operators to specific sellers (if on Business/Enterprise plan).
- Adjust operator commissions/bonuses manually.

- **Support Agents**

- Create, edit, suspend support user accounts.
- Assign tickets to specific support agents.
- Monitor ticket queue.

- **Billing & Subscriptions**

- Manage global subscription plans (edit pricing, features per tier).
- Force-upgrade or downgrade seller subscriptions.

- Issue refunds or credits.
 - Generate invoices manually.
 - View revenue analytics (subscriptions, per-order fees, commissions).
-

Orders & Operations Control

- See **all orders** across the platform with filters:
 - Status (pending confirmation, confirmed, canceled, failed delivery).
 - Risk score (low, medium, high).
 - Seller name.
 - Operator assigned.
 - Manually edit order status (override in case of errors).
 - Reassign an order from one operator to another.
 - Export orders data (CSV, Excel, PDF).
-

Analytics & Monitoring

- Seller Analytics: revenue per seller, confirmation rate, delivery rate.
 - Operator Analytics: performance leaderboard, call efficiency.
 - Global Platform Analytics:
 - Daily/weekly/monthly confirmed orders.
 - Cancellation reasons breakdown.
 - Revenue split (subscriptions vs per-order fees).
 - Complaint % by seller/product.
-

Call System Management (Later Stage)

- Set default call rules (e.g., max 3 call attempts per order).
 - Monitor call logs and recordings.
 - Reassign failed calls to another operator.
 - Adjust per-call costs if integrated with telecom provider.
-

AI & Risk Scoring Controls

- Manage AI scoring thresholds (e.g., flag orders below 40% score).
 - Adjust weight of variables (operator feedback, past data, tone flags).
 - Train AI with new data (upload historical confirmed/canceled orders).
 - Simulate/test scoring model before deploying.
-

Support Control

- View all tickets, with filters by: status, priority, category.
 - Assign/reassign tickets to support agents.
 - Override ticket resolution if escalated.
 - Access complaint statistics (per seller, per product, per region).
-

Communication & Notifications

- Send announcements/notifications to sellers (new feature, downtime).

- Send motivational messages to operators (gamification, leaderboard).
 - Customize automated emails & SMS templates (order confirmation, subscription renewal, etc.).
-

Team Management (Internal)

- Add/remove internal staff accounts (admins, managers, supervisors).
 - Define roles and permissions (super admin, finance admin, support manager, operator manager).
-

2. Advanced Admin Actions

Here are “pro” controls to make the platform scalable:

- **Bulk Actions**
 - Approve/decline multiple orders at once.
 - Upgrade/downgrade multiple sellers.
 - Assign orders in bulk to specific operators.
- **Fraud & Abuse Monitoring**

- Detect sellers with abnormal cancellation rates (possible fake orders).
- Detect operators with unusually low confirmation rates.
- Ban fraudulent sellers or operators.

- **Financial Control**

- View profit/loss dashboard.
 - Track telecom costs vs revenue.
 - Manage bonuses/challenges for operators.
 - Export financial reports (Excel/PDF) for investors or tax authorities.
-

3. Admin Dashboard Design (Top-Level Menu)

When an admin logs in, they should see:

- **Overview Page (Global KPIs):**

1. Total orders today/this week/this month.
2. Confirmation % and delivery %.
3. Active sellers vs inactive sellers.

4. Active operators vs idle operators.
5. Revenue snapshot.
6. Top 5 complaints reasons.

- **Navigation Tabs:**

1. Sellers
2. Operators
3. Orders
4. Support
5. Subscriptions & Billing
6. AI & Risk Scoring
7. Analytics
8. Settings

Admin Control of AI Tool & Feedback System

1. AI Scoring Configuration (Admin Panel)

Admin should be able to adjust the *recipe* of the AI scoring engine.

What Admin Can Control:

- **Patterns & Metrics**

- Add new risk signals (e.g., “Customer used fake phone number” or “Suspicious delivery region”).
- Disable metrics that aren’t useful anymore.

- **Weighting/Percentages**

- Example:
 - Past failed deliveries → 40% weight
 - Operator feedback → 30% weight
 - Customer call tone → 20% weight
 - Order value (high or low) → 10% weight

- 👉 Admin can move sliders to rebalance these weights.

- **Thresholds**

- Define risk ranges:
 - 0–40% → High Risk
 - 41–70% → Medium Risk
 - 71–100% → Low Risk

- **Pattern Editor**

- Add new conditions easily. Example:

- “If order value > 500 TND and customer is new → +15 risk points.”
 - “If repeat buyer with 3 successful deliveries → -20 risk points.”

2. Operator Feedback Form (Admin Control)

After every call, operators submit feedback.

Admin should **create & edit the form** to evolve it over time.

Editable Fields:

- **Tone Flags** (friendly, rude, hesitant, confident, rushed).
- **Price Sensitivity** (asked for discount, said “too expensive”).
- **Quality Doubts** (asked if product is original, warranty, etc.).
- **Delivery Hesitation** (unsure about receiving, asked to postpone).
- **Strong vs Weak Confirmation** (“Yes for sure” vs “Ok I’ll take it”).

👉 Admin can **add/remove questions** or change them. Example:

- Add: “Did customer ask about refund policy?”
 - Remove: “Did customer mention a friend referral?”
-

3. Additional Smart Admin Controls

Here’s what will make your AI & feedback system **next-level**:

- **Dynamic Rules Engine**

- Admin can create rules like:

- *If customer asks for discount + delivery region far away → mark as risky automatically.*

- **Simulation Mode**

- Admin tests new AI formula with old orders before pushing it live.
- See how many orders would’ve been flagged differently.

- **Operator Form Analytics**

- Track which questions get flagged most often.
- Example: “40% of canceled orders had ‘Price too high’ flagged.”

- Helps improve seller training.

- **Custom Risk Labels**

- Instead of just Low/Medium/High, admin can define labels like:
 - “Trusted Buyer”
 - “Suspicious”
 - “Likely Return”
 - “COD Risky”

- **Auto Actions Based on Risk**

- Admin defines:
 - Orders under 40% → require second confirmation call.
 - Orders above 80% → auto-mark as pre-confirmed.

-
